Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                              Score

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

C -!- FUNCTION: POTENT PRESYNAPTIC NEUROTOXIN POSSESSING PHOSPHOLIPASE

C ACTIVITY. SUBUNIT A IS LETHAL TO MICE AT 4 MG/KG (I.V.). IT IS

C ESSENTIAL FOR THE NEUROTOXICITY OF TEXTILLOTOXIN. SUBUNIT A

POSSESSES A LOW PHOSPHOTIPASE ACTIVITY.

C -!- FUNCTION: PAZ CATALYZES THE CALCIUM-DEPENDENT HYDROLYSIS OF THE

C -!- FUNCTION: PAZ CATALYZES THE CALCIUM-DEPENDENT HYDROLYSIS OF THE

C -!- CATALYTIC ACTIVITY: PHOSPHATIDYLCHOLINE + H(2)O = 1-ACYLGLYCERYL-

C -!- CATALYTIC ACTIVITY: PHOSPHATIDYLCHOLINE + H(2)O = 1-ACYLGLYCERYL-

C -!- GATALYTIC ACTIVITY: ACTU ANION.

C -!- SUBUNIT: PENTAMER OF THREE NON-COVALENTLY LINKED SUBUNITS A, B,

C -!- MISCELLANDOUS: ALL SUBUNITS ARE NECESSARY FOR MAXIMM LETHALITY.

C -!- SIMILARITY: BELONGS TO THE PHOSPHOLIPASE AZ FAMMILY.

"Cloning, expression and characterization of plasma platelet-activating factor-acetylhydrolase from guinea pig.";
J. Blochem. 120:838-844(1996).
1- FUNCTION: MODULATES THE ACTION OF PLATELET-ACTIVATING FACTOR (PAF)
BY HYDROLYZING THE SN-2 ESTEN BOND TO YIELD THE BIOLOGICALLY
INACTIVE LYSO-PAF. HAS A SPECIFICITY FOR SUBSTRATES WITH A SHORT
RESIDUE AT THE THE SN-2 POSITION. IT IS INACTIVE AGAINST LONG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CARBOHYD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CHAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed;
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score
